Setbacks

Setback regulations indicate how far from a property line a building or other improvement is allowed to be built. Setbacks are utilized to separate uses and structures, and regulate urban form. All built form overlay districts will contain setback regulations. Larger setback requirements apply in the residential areas versus nonresidential or mixed-use areas which at times do not have a setback requirement.

Midtown Greenway Land Use and Development Plan

Executive Summary

Introduction

The Midtown Greenway Land Use and Development Plan sets policy direction for land use and development in the Midtown Greenway corridor for the next 10-20 years, with implications for private development and investment in the public realm. The study boundary generally includes properties within one block of the greenway from the western border of the city east to Hiawatha Avenue.

The Plan evaluates the long-term viability of existing land uses along the corridor. It provides guidance for future land uses along the Midtown Greenway, and proposes development guidelines for development intensity and form. The recommendations take into consideration the development of Lake Street, current land use patterns, existing transit service and the anticipated rail transit under consideration for the area. Possible approaches to key implementation

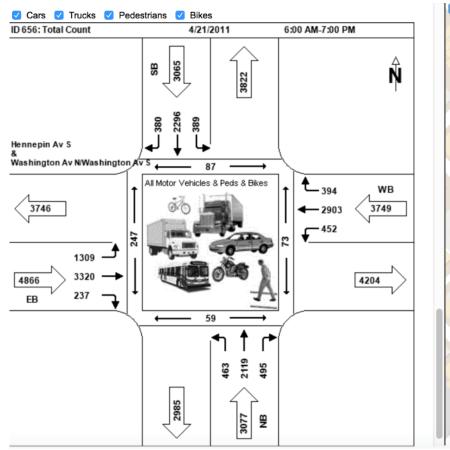

issues, such as open space ownership and management strategies, are explored and outlined in this report. All of the plan recommendations evolved through a process of stakeholder and public engagement that included extensive input from the community.
