A Resolution of Support for Ped Rail Bumpouts

The Pedestrian Advisory Committee enthusiastically supports the **adoption by Public Works of the Ped Rail bumpouts** made in MN and designed by Dezipline, and piloted by the Downtown Improvement District and Public Works in 2017. We are impressed that the product was durable, effective and intuitive for users, including during the winter.

Not only does the product perform superbly well in all conditions tested, the innovative product was developed and made in Minneapolis. As Minneapolis has become an example of a great city for biking, we look forward to also leading the way as a Walkable City. We encourage the city to continue to invest in pedestrian safety improvements that can be implemented in the short term.
